

## **Stanley E. Katz, Ph. D Advisor**

**Dr. Katz is the inventor of the first four N115 patents for pulmonary disease applications, and the co-inventor with Dr. Alain Martin on others.**

**Dr. Katz served as a past President in the early days of the company and coordinated all scientific and technological development of N115 in the early years.**

**His experience in directing scientific projects, working with federal agencies, and helping commercialize products help contribute to the EmphyCorp's success today.**

**Dr. Katz brings 44 years of experience in guiding research, industrial consulting and writing research grants and publications in scientific journals.**

**As Chairman of the Biochemistry and Microbiology Department at Rutgers University for 11 years, he gained extensive organizational, management and budgetary skills.**

**Dr. Katz is also the inventor on another patent that was granted on technology that resuscitates: injured cells and he has played a major role in developing new products based on this technology.**
